**Abstract:**

This study concerned with the synthesis and characterization of thiazolidinones &  $\gamma$ - lactams , the thiazolidinones compounds are prepared from A mixture of Schiff base (Imine) and thioglycolic acid,  $\gamma$ - lactams compounds are prepared from A mixture of Schiff base (Imine) with phenylsuccinic anhydride in moderate yields (52-71 %). The structures of these thiazolidinones and  $\gamma$ -lactams were established on the basis of the spectral data namely IR, <sup>1</sup>H-NMR, <sup>13</sup>C-NMR, <sup>13</sup>C-NMR DEPT , Mass spectra .

**Keywords:** thiazolidinones ,  $\gamma$ - lactams , Imine, NMR

**الكاما لاكتام**

**الخلاصة**

تضمنت هذه الدراسة تحضير وتشخيص مركبات الثيازوليدينيون و الكاما لاكتام , مركبات الثيازوليدينيون حضرت من تفاعل قواعد شف ( ايمين ) مع حامض الثايا كلايكولك , مركبات الكاما لاكتام حضرت من تفاعل قواعد شف (الايمين) مع انهديد الفنيل سكسنيك مع حصيله تفاعل متوسطه (52-71%) تراكيب هذه المركبات تم اثباتها بواسطة البيانات الطيفيه لطيف الاشعه تحت الحمراء وطيف الرنين المغناطيسي النووي البروتوني , طيف الرنين النووي المغناطيسي الكربوني , طيف ال DEPT وطيف الكتله .

## Introduction

Thiazolidinones (**figure 1**) are classified as doubly unsaturated five membered heterocyclic compounds contain one nitrogen, one sulphur and three carbon atoms including a carbonyl group.

Thiazolidinones and their derivatives presentation a large variety of activities such as antibiotic, diuretic, tuberculostatic, organoleptic, antileukaemic and antiparasitical<sup>1,2</sup>. As far as literature is concerned, little is known about thiazolidinones and their bioactivity. The chemistry of thiazolidin-4-one ring system is a considerable interest because it is the core structure in various synthetic pharmaceuticals, whose display a broad spectrum of biological activities. These heterocyclic compounds are having an atom of sulfur at position 1, an atom of nitrogen at position 3, and a carbonyl group at position 4<sup>3</sup>. The substitution can be done at positions 2, 3, and 5, the greatest difference in structure and properties is exerted by the group that will be attached with the carbon atom in position 2 (**Figure 2**) The carbonyl group present in the moiety is highly unreactive.

**Figure 2: Various Thiazolidinone rings and their substituents**

$\gamma$ -lactam is a Five-membered ring lactams, also known as  $\gamma$ -butyrolactam, pyrrolidin-2-one, azolidin-2-one or 2-oxopyrrolidine (**figure 3**). It is part of the core structure of a large number of natural and non-natural compounds covering a broad spectrum of biological activities. Accordingly,  $\gamma$ -lactams

are of primary interest in medicinal chemistry and many synthetic strategies have been disclosed to access this structural moiety.<sup>4</sup>

### **Experimental part**

All solvents were distilled/dried prior to use, whenever this seemed necessary, by standard methods. All solvent extracts were dried over anhydrous sodium sulphate unless otherwise specified.

**FT-IR spectrophotometer:** was recorded, using shimadzu FT-IR affinity spectrophotometer as KBr disks also Bruker in the department of chemistry, college of Science, Thi-Qar University, Iraq. Only principal absorption bands of interest are reported and expressed in  $\text{cm}^{-1}$ .

**$^1\text{H-NMR}$  spectra.** Were recorded, using BRUKER spectrophotometer ( 500 MHz ) in Tahrán university, Institute of Biology Medicinal Chemistry and Biotechnology. The chemical shift values are expressed in  $\delta(\text{ppm})$ , and using tetramethylsilane (TMS) as internal standard and using  $\text{d}_6\text{-DMSO}$  as solvent.

### **$^{13}\text{C-NMR}$ spectra and $^{13}\text{C-NMR DEPT}$ spectra**

Were recorded, using BRUKER spectrophotometer ( 75 MHz ) in Tehran university, Institute of Biology Medicinal Chemistry and Biotechnology. The chemical shift values are expressed in  $\delta(\text{ppm})$ , using tetramethylsilane (TMS) as internal standard and using  $\text{d-CDCl}_3$  as solvent.

**Mass spectra.** Were recorded, using 5973 Work mass selective Detector, in Sana'at sharifie Research Foundation .

### **General Procedure for preparation of Imines**

In general, the imines **2(a-c)** were prepared by reaction the amine with aldehyde or keton in 40 mL of methanol and 4-6 drops of glacial acetic acid then heated the mixture by hot plate, The reaction mixture is refluxed for (1-5) h with stirring . The progress of the reaction is followed by TLC. After completion , the solvent evaporated and then recrystallized from a suitable solvent .

the physical data of imines **2(a-c)** are gathering in the following table .

**3-Bromo-2-(pyridine-2-yliminomethyl)-phenol 2a**

It was prepared by reacting of 2-amino pyridine (0.01 mol, 1 g) with 5-Bromo-2-hydroxy benzaldehyde (0.01 mol, 2.4 g). Rf=1.2 , yield = 79.6%, m.p. = 138-139 °C. IR (KBr disk): 1610 cm<sup>-1</sup> (C=N).

**(4-chloro-benzylidene)-pyridin-3-yl-amine 2b:**

It was prepared by reacting of 3-amino pyridin (0.006 mol, 1 g) with Para chloro benzaldehyde (0.006 mol, 2.54 g). Rf=2 , yield = 97%, m.p = 73-74 °C. IR (KBr disk): 1623 cm<sup>-1</sup> (C=N).

**4-(5-Amino-naphthalen-ylimino)-pentan-2-one 2c:**

It was prepared by reacting of 1,5-di Amino naphthalene (0.006 mol, 1 g) with Acetylaceton (0.006 mol, 0.63 g ,0.65ml). RF=0.5 , Yield = 52.6%, m.p = 200 °C. IR (KBr disk): 1612 cm<sup>-1</sup> (C=N).

Table (2-1) prepared Imines

Imines	m.p °C	Yield %	Colour	Rf In cm
2a	138-139	79.6	orange	1.2
2b	73-74	97	violet	2
2c	200-201	52.6	Grey	0.5

**General Procedure of Thiazolidinones 3(a,c):<sup>5</sup>**

A mixture of compound **2(a,c)** and thioglycolic acid in Chloroform (15 ml), The content is allowed to react in a teflon beaker in microwave oven 100 w for (6-12) minutes giving solid product . ( Progress of the reaction is checked by TLC using hexane-ethyl acetate as eluent. After the completion of reaction, Chloroform is removed by distillation to give solid state. The solid were washed successively with 1N HCL 20mL, water (2×20 mL), 5% NaHCO<sub>3</sub> (20 mL) and brine 20 mL. The organic layer was dried Na<sub>2</sub>SO<sub>4</sub> The solvent was evaporator by Buckner funnel.

The following methods of thiazolidinones preparations are:

**2-(2-Bromo-6-hydroxy-phenyl)-3-pyridin-2-yl-thiazolidin-4-one 3a:**

It was prepared by reacting (**2a**) (0.003 mole, 1 g) and (0.003 mole, 0.33 gm, 0.25 mL) of thioglycolic acid. Rf=0.7 , yield =63 % , m.p. = 88-89 °C. IR

(KBr disk): 1673  $\text{cm}^{-1}$  ( $-\text{N}-\text{C}=\text{O}$ ).  $^1\text{H-NMR}$ (500MHz,  $\text{d}_6$ -DMSO,  $\delta$ , ppm) 3.81(d,1H), 4.19(d,1H), 5.68(s,1H), 6.15-7.51(m,3H), 6.09-8.12(m,4H) and 10.21 (s,1H).  $^{13}\text{C-NMR}$ (75MHz,  $\text{d}$  -  $\text{CDCl}_3$ ,  $\delta$ , ppm) 38.65, 48.02, (122.03-151.02) and 177.86

### **3-(5-Amino-naphthalen-1-yl)-2-methyl-2-(2-oxo -propyl)-thiazolidin-4-one 3c:**

It was prepared by reacting (2c) (0.001 mole, 0.41 g) and (0.001 mole, 0.157 gm, 0.12 mL) of thioglycolic acid. 0.6, Yield =69 %, m.p. = 139-140  $^{\circ}\text{C}$ . IR (KBr disk): 1676  $\text{cm}^{-1}$  ( $-\text{N}-\text{C}=\text{O}$ ).  $^1\text{H-NMR}$ (500MHz,  $\text{d}_6$ -DMSO,  $\delta$ , ppm) 3.88(d,1H), 4.07(d,1H), 1.90(s,3H), 2.79(s,3H), 4.29(s,2H), 4.60(s,2H) and 7.30-8.02(m,6H).  $^{13}\text{C-NMR}$ (75 MHz,  $\text{d}$ - $\text{CDCl}_3$ ,  $\delta$ , ppm) 40.80, 61.85, 18.28, 26.78, 36.95, (124.44-156.76), 179.17 and 177.86.

### **General procedure of $\gamma$ -lactams <sup>6</sup>**

In general the  $\gamma$ -lactam were prepared by reaction the mixture of imines with of Phenylsuccinic anhydride in 20 mL of chloroform then heated the mixture by hot plate, The reaction mixture was refluxed for (1-12) h with stirring. The progress of the reaction was followed by TLC. After completion, the solvent evaporated and then recrystallized from ethanol. The following methods of  $\gamma$ -lactam preparations are:

### **2-(2-Bromo-6-hydroxy-phenyl)-5-oxo-3-phenyl-1-pyridin-2-yl-pyrrolidine-3-carboxylic acid 4a:**

It was prepared by reacting (2a) (0.003 mole, 1 g) and (0.003 mole, 0.64g) of phenylsuccinic anhydride. Rf=0.7, yield =55 %, m.p. = 121-122  $^{\circ}\text{C}$ . IR (KBr disk): 1638  $\text{cm}^{-1}$  ( $-\text{N}-\text{C}=\text{O}$ ), 1727  $\text{cm}^{-1}$  ( $\text{HO}-\text{C}=\text{O}$ ).

$^1\text{H-NMR}$ (500MHz,  $\text{d}_6$ -DMSO,  $\delta$ , ppm) 3.28(d,1H), 3.52(d,1H), 4.12 (s,1H), 6.15-6.70 (m,5H), 7.63-8.35(m,7H), 10.31 (s,1H) and 11.42 (s,1H).  $^{13}\text{C-NMR}$ (75 MHz,  $\text{d}$ - $\text{CDCl}_3$ ,  $\delta$ , ppm) 42.88, 53.02, 59.79, 121.23-158.52, 125.95-135.95, 127.89-138.11, 172.13 and 185.88.

### **2-(4-Chloro-phenyl)-5-oxo-3-phenyl-1-pyridin-3-yl-pyrrolidine-3-carboxylic acid 4b:**

It was prepared by reacting (2b) (0.0046 mole, 1 g) and (0.0046 mole, 0.8g) of phenylsuccinic anhydride. Rf=0.1 yield =55 %, m.p. = 159-160  $^{\circ}\text{C}$ . IR (KBr disk): 1602  $\text{cm}^{-1}$  ( $-\text{N}-\text{C}=\text{O}$ ), 1695  $\text{cm}^{-1}$  ( $\text{HO}-\text{C}=\text{O}$ ).  $^1\text{H-NMR}$ (500MHz,  $\text{d}_6$ -DMSO,  $\delta$ , ppm) 3.32(d,1H), 3.56(d,1H), 4.53(s,1H), 6.21-6.64(m,5H), 7.30-8.20 (m,7H), and 11.40(s,1H).  $^{13}\text{C-NMR}$  (75MHz,  $\text{d}$ - $\text{CDCl}_3$ ,

$\delta$ ,ppm)40.13,51.28,58.54, (121.67-151.66) (124.56-138.54),169.18 and 183.05.

Prepared thiazolidinones &  $\gamma$ -lactam

## Results and discussion

### Schiff base

Schiff bases are formed by the condensation of a primary amine and an aldehyde or keton

comps	Yield (%)	m.p. (°C)	Rf In cm	Colour
3a	63	88-89	0.7	Yellowish
3c	69	139-140	0.6	Brown
4a	55	121-122	0.7	orange
4b	55	159-160	0.1	violet

### Thiazolidinones

Thiazolidinones are an important group of heterocyclic compounds, which have several biological activities in the areas of agriculture and medicine<sup>7,8</sup>, they are obtained from reaction of imines with thioglycolic acid to give thiazolidinones.

The suggested mechanism of preparation of thiazolidinones as the following scheme.

### $\gamma$ -lactams

$\gamma$ -Lactams represent important substructures for the synthesis of natural products<sup>9,10</sup> and biologically important compounds in drug discovery<sup>11</sup>. The prevalence of these structures<sup>12,13</sup> has resulted in the development of many efficient syntheses<sup>14</sup>, which have led to the production of diverse libraries of small molecules for biological evaluation.<sup>15,16</sup> Taking a lead from earlier studies, it is considered to utilize imine phenyl succinic anhydride cyclization in the presence of chloroform formation  $\gamma$ -lactams as shown in the following equation.

The suggested mechanism of preparation of thiazolidinones as the following scheme.

The suggested Mechanism

Figure 4 : prepared compounds

## IR Spectrum

The IR spectra of imines **2(a-c)** as KBr disc are characterized by four bands corresponding to the stretching vibrations of the aromatic (C-H), aliphatic (C-H), azomethine band (C=N), and aromatic (C=C). and substituted ring which occurs within the ranges 3224-3020, 3007-2777, 1638-1610, 1586-1475 and 925-617  $\text{cm}^{-1}$  respectively.

The IR spectrum of Thiazolidinones **3(a,c)** as KBr disk and representative spectra are characterized by six bands corresponding to the stretching vibration of the aromatic C-H, aliphatic C-H, carbonyl amide group N-C=O, aromatic C=C, C-N band, and bending vibration of S-C band, and substituted ring which occurs within the ranges (3042,3369), (2946,2925), (1694,1686), (1631,1546), (1276,1282), (626,778), and (925,617)  $\text{cm}^{-1}$  respectively.

The IR spectra of  $\gamma$ -lactam **4(a,b)** are characterized by bands corresponding to the stretching vibration of the -OH carboxylic, aromatic C-H, aliphatic C-H, carbonyl amide group, carbonyl carboxylic group, aromatic C=C and substituted ring which occur within the ranges (3026,3134), (2991,3064), (1727,1695), (1586,1651), (1555,1587) and (817-839)  $\text{cm}^{-1}$  respectively.

## <sup>1</sup>H-NMR spectral analysis of Thiazolidinones

The <sup>1</sup>H-NMR spectra of 2-(2-Bromo-6-hydroxy-phenyl)-3-pyridin-2-yl-thiazolidin-4-one (**3a**), show triplet signal at chemical shift  $\delta$  (2.50-2.51 ppm) for **d<sub>6</sub>-DMSO** solvent. Also it showed doublet signal at chemical shift  $\delta$  (3.81 ppm, J=3Hz), and doublet signal at chemical shift  $\delta$  (4.19 ppm, J=3Hz) for methylene thiazolidin-4-one ring for two protons, and showed proton carbon No2, this carbon atom is a chiral carbon gives racemic mixture (**R**, **S**) configuration<sup>17,18</sup> show a singlet signal at  $\delta$  (5.68 ppm), and a multiplet signal for three proton for phenol ring at  $\delta$  (6.15-7.51) as shown in **figure 5**. and also the spectrum data showed a multiplet signal at  $\delta$  (6.02), (7.80-8.12 ppm) for four protons of pyridine ring, and finally showed singlet signal at  $\delta$  (10.21 ppm) for one proton of phenol hydroxyl. as shown in the following **figure 6**.

Figure 5: The  $^1\text{H-NMR}$  spectra of aliphatic proton of **3a**

Figure 6: The  $^1\text{H-NMR}$  spectra of aromatic proton of **3a**

The  $^1\text{H-NMR}$  spectra of 2-(2-Bromo-6-hydroxy-phenyl)-5-oxo-3-phenyl-1-pyridin-2-yl-pyrrolidine-3-carboxylic acid **4a**, showed triplet signal at chemical shift  $\delta$  (2.57-2.58 ppm) for  $d_6\text{-DMSO}$  solvent. Also showed doublet signal at chemical shift  $\delta$  (3.28 ppm,  $J=4\text{Hz}$ ) and doublet signal at chemical shift  $\delta$  (3.52 ppm,  $J=4\text{Hz}$ ) for methylene of pyrrolidine ring for two protons, and showed proton carbon No2, this carbon is a chiral carbon gives racemic mixture (R,S) configuration show a singlet signal at  $\delta$  (4.12 ppm), and a multiplet signal for five protons for benzene ring at  $\delta$  (6.15-6.70) as shown in **figure 7**.

and show a multiplet signal at  $\delta$  (7.63-8.35) for seven aromatic protons of phenol and pyridine rings, and singlet signal at chemical shift  $\delta$  (10.31 ppm) for proton of phenol hydroxyl group, and singlet signal at chemical shift  $\delta$  (11.42 ppm) for proton of hydroxyl group as shown in **figure 8**.

Figure 7: The  $^1\text{H-NMR}$  spectra of aliphatic proton of **4a**

Figure 8: The  $^1\text{H-NMR}$  spectra of aromatic proton of **4a**

Figure 10 : The <sup>1</sup>H-NMR spectrum of 3c

Figure 11: The <sup>1</sup>H-NMR spectrum of 4a

Figure 12: The  $^1\text{H-NMR}$  spectrum of **4b**

### The $^{13}\text{C-NMR}$ spectrum

The  $^{13}\text{C-NMR}$  spectrum of 2-(2-Bromo-6-hydroxy-phenyl)-3-pyridin-2-yl-thiazolidin-4-one **3a** give triplet signal at  $\delta$  (76.02-78.15 ppm) for  $\text{d-CDCl}_3$  solvent, and also show two signals, one singlet signal at  $\delta$  (38.65 ppm) for carbon methylene group and another singlet signal at  $\delta$  (48.02 ppm) for carbon No.2 in pyrrolidine ring. The  $^{13}\text{C-NMR}$  spectrum of **3a** also show multiplet signals at  $\delta$  (122.03-151.02 ppm) for aromatic carbon atoms (pyridine ring+ phenol), and finally show singlet signal at  $\delta$  (177.86 ppm) for one carbon of amide carbonyl.

The  $^{13}\text{C-NMR}$  spectrum of 2-(2-Bromo-6-hydroxy-phenyl)-5-oxo-3-phenyl-1-pyridin-2-yl-pyrrolidine-3-carboxylic acid **4a** show triplet signal at  $\delta$  (77.13-77.59 ppm) for  $\text{d-CDCl}_3$  solvent, and also show three signals, one singlet signal at  $\delta$  (42.88 ppm) for one carbon of methylene group and another singlet signal at  $\delta$  (53.02) for carbon No.2, and singlet signal at  $\delta$  (59.79) for carbon No.3 in pyrrolidine ring. The  $^{13}\text{C-NMR}$  spectrum of **4a** also showed a multiplet signals at  $\delta$  (121.23-158.52 ppm) for the aromatic carbon atoms of pyridine ring, and showed multiplet signals at  $\delta$  (125.95-138.11 ppm) for the aromatic carbon atoms of two phenyl rings, and showed singlet signal at  $\delta$  (172.13 ppm) for one carbon atom of the amide carbonyl group, and finally show singlet signal at  $\delta$  (185.88 ppm) for one carbon atom of carboxyl group.

Figure 13 :  $^{13}\text{C}$ -NMR spectrum of 3a

Figure 14 :  $^{13}\text{C}$ -NMR spectrum of 3c

Figure 15:  $^{13}\text{C}$ -NMR spectrum of 4a

Figure 16:  $^{13}\text{C}$ -NMR spectrum of **4b**

The  $^{13}\text{C}$ -NMR DEPT spectrum of 2-(2-Bromo-6-hydroxy-phenyl)-3-pyridin-2-yl-thiazolidin-4-one **3a** is show a signal at  $\delta$  48 (-) ppm for (CH<sub>2</sub>), And signal at  $\delta$  38 (+) ppm of one carbon off -CH- of thiazolidin-4-one ring, and The  $^{13}\text{C}$ -NMR DEPT spectrum of the aromatic region are within the range(125-135)(+)ppm , and show signal at  $\delta$  (122-148)(+)ppm for the pyridine ring, as shown in figure 17.

Figure 17 : $^{13}\text{C}$ -NMR DEPT spectrum of **3a**

## Mass spectra

The Mass spectra of 2-(2-Bromo-6-hydroxy-phenyl)-5-oxo-3-phenyl-1-pyridin-2-yl-pyrrolidine-3-carboxylic acid (**4a**) showed the molecular ion peak in 453,455 m/z, R=27% and important fragmentation peaks in 452,454 m/z, R=19%, 424,426 m/z, R=16%, 399,401 m/z, R=28%, 382,384 m/z, R=20%, 354,356 m/z, R=100%, 223 m/z, R=30%, 181 m/z, R=10%, 103 m/z, R=36%, 78 m/z, R=26%, 77 m/z, R=51%, 65 m/z, R=18%. As shown in figure 18.
